CORLISS.

Square Base Burner, for Hard Coal or Coke.

	No. 32.	No. 36.	No. 42.
Diameter of Fire Pot	11 in.	15 in.	16 in.
Height, (over all).....	5 ft. 2 "	5 ft. 5 in.	5 ft. 8 in.
Weight.....	340 lbs.	400 lbs.	460 lbs.
List Price	\$53.00	\$59.00	\$70.00.

Entirely new, strictly first-class, up-to-date, base heating, hot air circulating and ventilating base burner, embracing every advantage known to modern stove construction.

All parts, including fire pot, grates, etc., are extra heavy and durable.

Movable nickel plated sections can be quickly and conveniently put in place. Upper nickel section entirely separate, and can be taken off or put on at pleasure, and no bolts to be removed. The main body of the stove can be easily separated in the center and handled in sections. The fire pot, which is large and heavy, is supplied with the duplex grate—the Ransom's Improvement.

This stove is a perfect ventilator and circulator, being supplied with hot air flues in the rear, extending from the bottom to the top. Also air is supplied through the openings in the nickel top section, giving abundant capacity for heating upper rooms when desired. Flues are large, provided with clean-out door in front.

Perfect in every detail, and stands at the head of the base burner class.

Fully Warranted in Every Particular.

CLEVELAND CO-OPERATIVE STOVE CO.

CORLISS.

Square Base Burner, For Hard Coal or Coke.

Three Sizes, Nos. 32, 36, 40.

BALDWIN'S PATENT

**CIRCULATOR
DOUBLE AIR TIGHT
HEATING STOVE,**

**FOR HARD COAL, SOFT COAL,
COKE OR FOR LIGNITE**

(DAKOTA COAL.)

DESCRIPTION, SHOWING PLAN OF CONSTRUCTION.

The external, and a portion of the internal appearance of the stove is shown by the annexed illustrations. It will be understood that the stove is placed upon a highly ornamental, carved Nickel Plated base. The main bottom of the stove is provided with openings around and near the outside, but inside of the ornamental case; also with openings connected with air ducts in the center. All of these openings receive air from beneath the stove and pass the same up and around between the ornamental casing and the interior parts of the stove; said air after becoming heated is passed out into the room through the openings in the ornamental casing at different heights, and at the top.

The ash base is double; otherwise is provided with a partition through the center, said partition containing the center air ducts before mentioned.

The ash base has two entirely separate doors, each provided with air tight draft openings, which are opened and closed by a quick operating screw motion. Each of the ash base doors is provided with an air tight shaker door, which can be opened separately for the purpose of operating the grate while the ash doors are closed. Each compartment of the ash base is supplied with a separate ash pan of liberal dimensions.

At the top of the ash base there are two entirely distinct duplex grates—one over each ash pan. The main fire pot above the ash pans is of an oval round form, but not divided, and is provided with the two distinct duplex grates before mentioned.

The style, symmetry and the ornamentation, as shown by the illustrations, conform with the highest state of the art. The carvings and scroll work are of the most modern design and unequalled.

CLEVELAND CO-OPERATIVE STOVE CO.

The front portion of the main top is nickel plated, as are also the two front ornamental plates, together with highly ornamental nickel plated urn, foot rests, turn-buckles, draft handles, etc.

The entire BASE is NICKEL PLATED.

The operating portions of the stove are entirely separate and distinct from the external ornamental casings which surround the same. All fittings are air tight, thus giving entire control of the operation of the stove at all times, and enabling fire to be retained for ANY DESIRED PERIOD OF TIME.

This stove is designed for the use of HARD COAL, SOFT COAL, COKE or LIGNITE, either of which can be used with ENTIRE SATISFACTION.

DOUBLE HEATING.

As a DOUBLE HEATER, THE CIRCULATOR is unequalled. The ornamental swing top can be removed. An open work cover, located in the main top under the swing top, is arranged with a collar for receiving a double heater pipe.

TO ARRANGE AS A DOUBLE HEATER, remove the ornamental swing top and reverse the main top cover so the pipe collar or flange will be uppermost, and it is ready to receive a double heater pipe 6 inches in size.

The arrangement of the stove is such that air taken from beneath the stove and passed upwards between the main heating portions of the stove and the outside casing, and thence direct to the double heater pipe, affords a very powerful heat, to be carried into the room above or adjoining, and this without obstructing in any manner the direct radiation.

SPECIAL NOTICE.

This stove has two distinct draft outlets, one of which is grated and is always open. The other is supplied with a damper, which always should be open in starting a fire, or when a free combustion is desired.

To check the fire or to retain fire over night, close this damper. Also open screw draft to the upper front doors if found necessary.

CLEVELAND CO-OPERATIVE STOVE CO.
